

PIPELINE SPILL REPORTING NETWORK

NOTE: The "significance" of a spill must be assessed for each individual event based on criteria such as volume, location, extent, containment, proximity to water, private property or environmentally or politically sensitive areas, etc. In general, however, any spill which may escape beyond the pipeline right-of-way, or any spill in excess of ten (10) barrels should be considered significant and therefore reported as shown below. If there is doubt as to a spill's significance, it should be reported as well.
